

HG-DISP Heel Grounder - Disposable

The **HG-DISP**, Disposable Heel Grounder from Bennett & Bennett is the perfect solution for plant visitors and other temporary personnel who enter static controlled environments with ESD protective flooring. Constructed of a durable non-woven polyester fabric impregnated with conductive fiber, Bennett & Bennett disposable heel grounders use the entire volume of the fabric to provide protection. A current limiting resistance is built into the fabric for operator safety.

Bennett& Bennett disposable heel grounders are easy to use and comfortable to wear.

1. Align the pressure-sensitive end of the product with the front edge and center of the shoe's heel.
2. Peel the protective liner and mount the device. Press it firmly to the bottom of the heel.
3. Wrap the contact ribbon of the heel grounder up the back of the shoe and lay it inside.
4. Step into the shoe.
5. Repeat steps one through four on the other shoe.

Heel grounders are dependent on foot perspiration in the shoe to create and maintain electrical contact with the body. **HG-DISP** works reliably with stockings and socks due to the moisture present.

Material: Non-woven polyester with carbon
Resistance (RTG): $> 1 \times 10^5$ to $< 3.5 \times 10^7$
Size: .5" x 12"
